

IREST BRILLACTIQ (A665)

INTERGALACTIC DIMENSION OF MASSAGE

The **iRest Brillactiq Massage Chair (A665)** is an ultra-modern model with a number of highly advanced features to provide a customised massage.

- The **massaging arms** operate in three planes, ensuring the right speed and allowing you to adjust the intensity to make the massage even more accurate and imitate the movements of human hands even better.
- In turn, an individually tailored massage is guaranteed by the **Health Detection System**. The chair monitors the pulse and oxygen levels in the blood before the session begins. Taking the results into account, it selects a personalised massage that removes fatigue and provides an exceptional level of relaxation.
- Also appearing for the first time in a massage chair is the **'segmented frame'**, a linear guide divided into two independent parts. Thanks to this, by moving the back and seat independently and with the concurrent operation of the airbags, the chair adopts the position needed to gently and sensitively stretch the body.
- The massage experience is further enhanced by the **SL-shape feature**, thanks to which the massage is performed over the longest distance of 135 cm, Zero Wall, Heating, Zero Gravity.
- Controlling iRest's most sophisticated chair is possible thanks to a large, user-friendly and easy-to-read **touchscreen**. Meanwhile, the key functions can be controlled via a **handy built-in panel** or by **voice control** in English.

In conclusion, the iRest Brillactiq (A665) proves to be the ideal choice for those looking for a top-of-the-range massage. Its phenomenal massage and striking design will satisfy even the most demanding customers.

Key features of iRest Brillactiq (A665):

- 20 automatic programmes, 6 groups of manual techniques, including 11 individual techniques,
- 3 massage session memory slots (the chair stores the last settings configured by the user),
- 2 personalised massage settings (the chair allows you to select parameters such as range, intensity or technique and save them as your personal settings);
- Health Detection System - innovative health detection system monitors pulse rate, blood oxygen content and fatigue level, and based on the collected information selects an appropriate massage session.
- SL-shape - the massage is carried out over the longest 135 cm from the neck up to the thighs. The curved S-shaped guide precisely follows the natural shape of the spine.
- Zero Wall - the Zero Wall function allows the chair to be positioned very close to the wall. When reclining, the chair automatically moves away from the wall.
- Segmented frame - for the first time, the linear guide has been divided into two independent parts - the backrest and the seat. This allows the chair to assume a massage position between Zero Gravity and the almost Flat position.
- Zero Gravity - this position, considered to be the most comfortable one for massage, takes the strain off the muscles around the spine and relaxes them gently.
- Airbags - positioned around the feet, legs, shoulders, back and hips, airbags stimulate blood circulation and alleviate any accumulated tension. It can be adjusted in 5 levels.
- Leg massage - the action of the foot massage rollers, calf massage mechanism and airbags is highly effective in relieving accumulated tension.
- Controls - a large, easy-to-read touch screen allows you to conveniently control all the various functions of the massage chair. And in addition - a handy built-in control panel and voice control in English.
- Additional functions: heating, stretching, magnetotherapy, Bluetooth speakers.
